JOSÉ JAVIER FUENTE MEZA

AI Engineer · Unity / XR Tech Lead · Mobile Developer

SUMMARY

Developer with 3+ years building real-time XR and mobile products in Unity and the AI tooling around them. I've shipped a VR exposure-therapy tool for SEDENA, a virtual factory simulation for Tec de Monterrey and a production WhatsApp RAG chatbot. I build evaluation frameworks for LLM agents and lead Unity architecture and mobile releases. My niche is the overlap: real-time product engineering plus applied AI.

EXPERIENCE

AI Engineer & Unity Tech Lead — Yeltic

January 2023 – Present · Virtual training & XR solutions

Applied AI

- Built and deployed a production LLM-powered WhatsApp RAG chatbot end to end (prompt design, conversation flow, integration), used by 30 users.
- Benchmarked semantic vs. fixed-size chunking with FAISS retrieval, improving retrieval precision by 35%.
- Designed evaluation frameworks for LLM conversational agents: correctness, faithfulness, latency and failure modes. Applied the Big Five (OCEAN) model to evaluate agent personality consistency.

Unity / XR & Mobile

- Technical lead for Unity XR and mobile apps: **SEDENA** VR exposure therapy, **Tec de Monterrey** virtual factory sim, **ILCE** CAVE experience, Yeltic leARn (AR).
- Defined Unity architecture standards and reusable modular frameworks shared across products.
- Owned mobile performance and memory optimization and Addressables content pipelines, cutting load times by 60%.
- Owned iOS/Android release pipeline (versioning, App Store / Google Play) for the Yeltic training app with a Firebase backend.
- Leading the migration of Bimbo's "Taller del Conductor" into a networked training system: a master PC orchestrates instructor-controlled tablets for live in-room sessions.

QA

- QA Lead for KTP, a conversational-AI training platform: test strategy, test cases and release validation; mentoring a QA intern.

Freelance Web Developer

2025 – Present

- Sole technical owner of an 8-sprint WooCommerce e-commerce project, using staging to validate high-risk changes.
- Full frontend redesign, Stripe/PayPal integration, and debugging of plugin/dependency conflicts in production.
- Implemented GA4/GTM and technical SEO; used funnel analysis to find conversion drop-off points.

PROJECTS

- **Play & Learn** (freelance): Unity vocabulary minigame suite for an English-language school in Barcelona, Spain.
- **Thesis:** RTS AI agent generation tool in Unity.

CERTIFICATIONS

- Large Multimodal Model Prompting with Gemini — DeepLearning.AI, 2025
- LLMOps — DeepLearning.AI, 2025

TECHNICAL SKILLS

Languages

- C# / .NET, Python
- C++, JavaScript, HTML
- Swift (basic–intermediate)

Unity / XR

- Unity (VR, AR, Meta Quest, CAVE)
- Modular architecture, Addressables
- Performance & memory optimization

AI / LLM Engineering

- RAG: chunking, embeddings, FAISS
- LLM & agent evaluation (faithfulness, latency)
- Prompting & multimodal models (Gemini)
- Chatbots / conversational agents

Mobile

- Android & iOS (Unity)
- App Store / Google Play releases
- Firebase

QA & Tools

- Test strategy, test case design
- Git, Azure DevOps, Agile / Scrum

Web

- WordPress / WooCommerce
- GA4 / GTM, technical SEO

LANGUAGES

Spanish: Native
English: Upper-intermediate (B2)

EDUCATION

SAE Institute Mexico (2019–2022)
Bachelor's degree in Game Programming
