JOSÉ JAVIER FUENTE MEZA

AI Engineer · Mobile & Unity Developer · Web Developer

SUMMARY

Multi-disciplinary developer spanning AI, mobile, and web. At Yeltic, works as both AI engineer — building agent evaluation frameworks, optimizing RAG pipelines (semantic vs. fixed-size chunking), and shipping an LLM-powered WhatsApp chatbot — and technical lead for Unity mobile development (C#) on production-grade cross-platform apps. In parallel, freelance web developer who has led a full-scope e-commerce project end to end. Combines strong architecture and performance judgment with hands-on diagnostic skills in real production environments.

EXPERIENCE

Unity Developer (.NET ecosystem) — Yeltic

January 2023 – Present

- Designed and built evaluation frameworks for LLM-based conversational agents, covering correctness, latency, and failure-mode analysis.
- Optimized RAG pipelines by benchmarking chunking strategies (semantic vs. fixed-size) to improve retrieval precision and answer quality.
- Built and deployed an LLM-powered WhatsApp chatbot end to end, from prompt design to conversation flow and integration.
- Technical lead for Unity mobile and cross-platform development across multiple large-scale educational, therapeutic, and industrial applications.
- Defined Unity architecture standards, modular systems, and reusable frameworks shared across mobile products.
- Owned mobile performance and memory optimization (load times, battery, device fragmentation) and scalable content pipelines with Addressables.
- Owned the full iOS build pipeline: build configuration, versioning, App Store deployment, and release management.
- QA Lead for KTP, a conversational-agent application for training: defined test strategy and test cases, and validated flows before release.
- Leading the migration of Bimbo's "Taller de Conductor" project into a custom personalized-training system: a master PC orchestrates a networked classroom of instructor-controlled tablets, enabling a remote instructor to deliver live training within the same physical room.
- Other projects: SEDENA VR Therapies, Virtual Plant Coronatec, Yeltic leARn.

Freelance Web Developer

2025 – Present

- Sole technical owner of an 8-sprint web development project (e-commerce), running staging environments to validate high-risk changes before production.
- Diagnosed and resolved plugin/dependency conflicts, including fatal class errors triggered by updates.
- Delivered a full frontend redesign (13-section homepage) with responsive visibility layers and positioned overlays.
- Managed e-commerce catalog and coordinated production updates to dependencies and payment gateways (Stripe, PayPal), with live checkout verification.
- Implemented web analytics (GA4/GTM) and technical SEO, running funnel analysis to pinpoint conversion drop-off points.

PROJECTS

- Play & Learn (freelance): vocabulary-based educational minigame suite built for a Spanish language school of the same name.
- Thesis: RTS AI agent generation tool in Unity.

CERTIFICATIONS

- Large Multimodal Model Prompting with Gemini — DeepLearning.AI, 2025
- LLMOps — DeepLearning.AI, 2025

TECHNICAL SKILLS

AI / LLM Engineering

- RAG pipelines: chunking (semantic, fixed-size), embeddings, retrieval
- Agent evaluation frameworks
- LLM prompting & multimodal models (Gemini)
- Conversational agents / chatbots (WhatsApp)
- Python (AI tooling)

Mobile Development

- Unity mobile (iOS / Android), cross-platform delivery
- iOS build pipeline, versioning & App Store deployment
- Mobile performance & memory optimization

Web Development

- WordPress / WooCommerce, Avada / Fusion Builder
- Staging environments, hosting management
- Web analytics: GA4 / GTM, conversion funnels
- Technical SEO, payment gateway integration

QA / Testing

- QA leadership on production applications
- Test case design and test planning

General

- Git / version control, Agile / Scrum
- C++, HTML, JavaScript
- Swift (basic–intermediate)

SOFT SKILLS

Self-motivated, problem solving, attention to detail, responsible, team-oriented, time management, perseverance.

LANGUAGES

Spanish: Native
English: Intermediate

EDUCATION

SAE Institute Mexico (2019–2022)
Bachelor's degree in Game Programming
